# ¿Para qué sirven?

- Para detectar brechas de conocimiento o saber si el trabajo a investigar está más o menos estudiado en función de la producción científica.
- Cuando tenemos el artículo de mucho interés para nuestra investigación y queremos encontrar otros parecidos
- Extraer una representación gráfica de la literatura científica estudiada
- Nos proporcionan información sobre artículos similares o relacionados, citados en la bibliografía y citas al artículo en cuestión.
- Información sobre autores destacados en el ámbito científico
- El listado de artículos seleccionados normalmente se pueden exportar en formatos compatibles con Excel y gestores bibliográficos

Science mapping aims to build bibliometric maps that describe how specific disciplines, scientific domains, or research fields are conceptually, intellectually, and socially structured. Different techniques and software tools have been proposed to carry out science mapping analysis. The aim of this article is to review, analyze, and compare some of these software tools, taking into account aspects such as the bibliometric techniques available and the different kinds of analysis. © 2011 Wiley Periodicals, Inc.

Abstract Objective To identify, appraise and synthesise the results of systematic reviews of the literature (SRLs) that examines the effectiveness of interventions to increase advance directive (AD) completion rate. Methods Narrative review of the literature—an overview of SRLs focused on interventions to improve patients' AD completion rate. Results Seven SRLs were located. A wide range of interventions was identified in order to determine their influence on the AD completion rate. Conclusion The most effective method of increasing the use of ADs is the combination of informative

# Discover the world of Scientific Literature

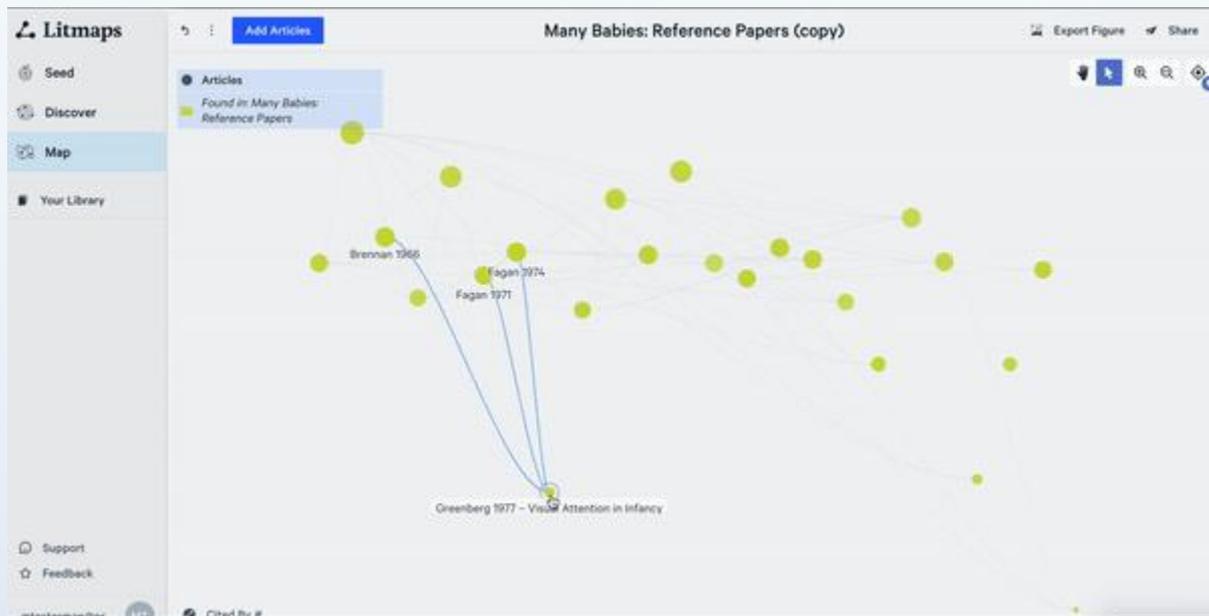

🔍 Search by keyword, author, DOI, Pubmed ID or arXiv ID

The screenshot displays the Litmaps web application interface. On the left is a navigation sidebar with options: Seed, Discover (highlighted), Map, and Your Library. At the bottom of the sidebar are links for Support and Feedback. The main content area is titled 'Unsaved Search' and contains two sections:

- 1. Choose Starting Articles**: Includes a description and a search input field.
- 2. Add Search Filters**: Includes a description and three filter controls: Search Depth (set to 'T'), Keywords (input field), and Date Range (set to 'All time').

On the right side, there is an 'Input Articles' section with a legend for 'Found in Many Babies' (yellow) and 'Reference Papers' (green). Below this is a network graph showing interconnected nodes representing authors and their works. The nodes are labeled with author names and years, such as Seayman 1964, Fagan 1971, Hunter 1983, Rose 2005, Wang 2020, Colombo 1968, Roder 2000, Bahrick 1997, Caron 1968, Fagan 1970, Fagan 1974, Rose 1962, Brennan 1966, Fanz 1964, Fagan 1970, Fagan 1974, Richards 1997, Rose 1962, Hunter 1988, Crumpson 1991, Hunter 1988, Singh 2015, Miceli 1998, and Love-Coller 2008.

#### Abstract

Objective: To identify, appraise and synthesise the results of systematic reviews of the literature (SRLs) that examines the effectiveness of interventions to increase advance directive (AD) completion rate.

Methods: Narrative review of the literature an overview of SRLs focused on interventions to improve patients' AD completion rate.

Results: Seven SRLs were located. A wide range of interventions was identified in order to determine their influence on the AD completion rate.

### Abstract

**Background**The aim of this study is to carry out the economic evaluation, in term of a cost-minimization analysis that considers healthcare costs and indirect costs, of robot-assisted hysterectomy (RAH) compared with conventional laparoscopic hysterectomy (CLH) in female adults scheduled for total laparoscopic hysterectomy for benign conditions. **Methods**Cost-minimization analysis based on an analytic observational study of prospective cohorts with a five-year time horizon. Eligible participants were all female adults scheduled for total laparoscopic hysterectomy for benign conditions at tertiary hospital. The economic evaluation was conducted from a Spanish National Health Service and societal perspective, including healthcare costs and indirect costs. The costs are expressed in Euros from the year 2015. **Results**One hundred sixty nine patients were analyzed, 68 in the RAH group and 101 in the CLH group. Average cost for the RAH group was €9982.42 compared to
